

Import a JSON file from the command line and apply actions with the data present in the JSON file

Aim:

To import a JSON file from the command line and apply the following actions with the data present in the JSON file where, projection, aggregation, remove, count, limit, skip and sort.

Procedure:**Hive Download and installation:**

1. Starting Hadoop Services

Open PowerShell as administrator and go to Hadoop sbin directory and start hadoop services using the following commands:

`Start-all.cmd`

```
C:\Windows\System32>start-all.cmd
This script is Deprecated. Instead use start-dfs.cmd and start-yarn.cmd
starting yarn daemons
```

2.Create a .json file with the below content:

```
{ "id": 1, "name": "John Doe", "age": 30, "salary": 50000 }
{ "id": 2, "name": "Jane Smith", "age": 25, "salary": 60000 }
{ "id": 3, "name": "Alice Johnson", "age": 28, "salary": 55000 }
{ "id": 4, "name": "Bob Brown", "age": 35, "salary": 70000 }
{ "id": 5, "name": "Charlie Davis", "age": 40, "salary": 80000 }
{ "id": 6, "name": "Eve White", "age": 22, "salary": 48000 }
{ "id": 7, "name": "Frank Black", "age": 32, "salary": 65000 }
{ "id": 8, "name": "Grace Green", "age": 27, "salary": 52000 }
{ "id": 9, "name": "Henry Gold", "age": 29, "salary": 59000 }
{ "id": 10, "name": "Isabel Blue", "age": 33, "salary": 73000 }
```

Derby Network Server:

Run the following command to open Derby:

```
StartNetworkServer -h 0.0.0.0
```

```
C:\Windows\System32>startNetworkServer -h 0.0.0.0
Fri Sep 13 19:17:50 IST 2024 : Security manager installed using the Basic server security policy.
Fri Sep 13 19:17:50 IST 2024 : Apache Derby Network Server - 10.14.2.0 - (1828579) started and ready to accept connections on port 1527
_
```

Go to first PowerShell window and check whether NetworkServerControl is running.

```
C:\Windows\System32>jps
2976 DataNode
9392 NodeManager
11640 NetworkServerControl
11116 NameNode
23452 Jps
2668 ResourceManager
C:\Windows\System32>_
```

3. Starting Apache Hive:

Go to Apache Hive's bin location with cd command and run the following command:

```
hive --service schematool -dbType derby --initSchema
```

8. Open Hive shell by typing:

```
hive
```

```
C:\hive\bin>hive
SLF4J: Class path contains multiple SLF4J bindings.
SLF4J: Found binding in [jar:file:/C:/hadoop/share/hadoop/common/lib/slf4j-log4j12-1.7.30.jar!/org/slf4j/impl/StaticLoggerBinder.class]
SLF4J: Found binding in [jar:file:/C:/hive/lib/log4j-slf4j-impl-2.17.1.jar!/org/slf4j/impl/StaticLoggerBinder.class]
SLF4J: See http://www.slf4j.org/codes.html#multiple_bindings for an explanation.
SLF4J: Actual binding is of type [org.slf4j.impl.Log4jLoggerFactory]
2024-09-13 19:33:54,247 INFO conf.HiveConf: Found configuration file null

```

Create a Database:

Start by creating a database. Open the Hive CLI and follow the steps below:

1. Use the **CREATE DATABASE** statement to create a new database:

```
CREATE DATABASE IF NOT EXISTS emp_json;
```

2. Verify the database is present:

```
SHOW DATABASES;
```

```
hive> SHOW DATABASES;
2024-09-13 19:37:28,134 INFO conf.HiveConf: Using the default value passed in for log id: 041a6a49-576e-4335-bb38-a8565534cf6b
